The patented side-to-side (STS) offset boom combined with the tight tail swing on the TB153FR provides unmatched visibility to the work equipment and enables it to rotate fully with very little overhang.

Its low center of gravity and optimized counterweight placement creates an extremely stable platform with lifting capabilities similar to that of a conventional machine.

The TB153FR also come standard with 2 speed travel with automatic step down motors that provide torque on demand when pushing, climbing, or turning in high speed mode.

Serviceability on the TB153FR is simple with the tilt-up cab that provides access to the engine and hydraulic components. Rear access to the machine allows convenient access to daily checks and routine maintenance points.

A tilt-able cabin and large lockable service hoods provide outstanding maintenance access.
